

Introduction to Digital Printing

Industry Leading Technology

Utilising a 7 colour printing set-up capable of printing at 1440 dpi, the printer is able to apply photo-quality and true greyscale images to a wide range of substrate materials. Not only are the images of the highest quality, the printing process also applies an antibacterial coating. The inks are also resistant to UV light helping to maintain their vibrancy...even in outdoor conditions!

Digital Printing allows you to transform washrooms & wall cladding into something creative, vibrant and unique.

What can we print onto?

Provide us with your own images and text, choose from our existing range of graphics or ask our design team to create something unique for your specific requirements.

Imagery is not only limited to Cubicles, we can also print to...

- IPS Units
- Vanity Units
- Wall Clad Boards
- Splashbacks
- The list is endless...

Take a look at some of our examples on the following pages to kick-start your creativity.

Any Image, Photograph, Graphics or Logo can be transferred to our products

Introduction to Engraved Signage

CNC Engraved Signage

Signage can be engraved into a Solid Grade material by our CNC machine

Signage can be applied directly to the products we supply or provided loose for positioning and fixing on-site.

Our CNC machine is capable of engraving into sheet materials upto 3200 x 1200 mm in size.

The CNC machine is also capable of cutting sheet material into any 2D shape, allowing you to further customise your signage plaques.

Some of the standard signs we offer are displayed to the right. We are also offer a custom sign service, please enquire for details.

Unisex WC Sign

Sports Halls / Gymnasiums

This Sports Hall Changing Room has been transformed with Sports themed graphics printed directly to the Changing Cubicles.

Simple silhouette figures have been combined with large splashes of colour creating an interesting, colourful and bright environment.

The imagery for the Digital Print was created using Vector based graphics, which is capable of being re-sized without loss of quality.

Night Clubs & Bars

Digital Print is ideal for use in Night Clubs and Bars, enabling you to create attractive and vibrant environments.

Here Black Partitions and Pilasters have been used to complement the existing decor, whilst Digital Print has been used to introduce a splash of colour, creating a striking contrast.

The imagery for the Digital Print was created using Vector based graphics, which is capable of being re-sized without loss of quality.

Printing onto Partitions

The typical Cubicle Partition measures 1820x1500mm providing the perfect area to display large format graphics.

The End Cubicle of this Corner Layout has been used as a 'feature wall' to display a captivating image introducing colours to an otherwise uninspiring space.

Digital Print - Versatile Applications

Digital Graphics are not only suitable for commercial situations or limited to printing onto Cubicle panels.

Digital Print has been used in this domestic bathroom to create a Tropical Sunset feature wall.

The image has been printed directly to our Shower-Wall panels, filling an entire wall.

The Shower-Wall panels themselves are manufactured from a 12mm Plywood core with a High Pressure Laminate finish to the front and back. The panels create a waterproof finish.

The inks used for our Digital Printing process have been rigorously tested and are resistant to water and cleaning agents.

Cubicle Logos

Large Male and Female symbols have been engraved into the end Partitions of these Cubicles in a Unisex Washroom.

The Cubicles are constructed from 13mm Solid Grade Laminate, the engraving reveals the black core of the SGL.

Subtle Blue and Pink shades have been chosen for the Partiton and Pilaster panels providing a good contrast to the black engraving.

The Symbols were created in CAD Software and exported directly to our CNC Machine.

Entrance Logos

Here we have used a 13mm Solid Grade Laminate board to create these Male and Female Entrance plaques.

Engraved from White SGL the signs contrast against the Mahogany Doors...maximising their visibility.

Engraving into SGL reveals its black core, to achieve best results we therefore recommend engraving into light-medium shades of laminates.

Engraving can also be applied directly our products such as Cubicles and Vanity Units.

We have a Library of standard Signs to choose from, all of which can be scaled to your required dimensions. Alternatively, you can supply your own signage designs in dxf format.

Customer Supplied Images

If you intend to supply us with your own imagery we would recommend reading the following guidelines to ensure that the quality of the image is retained during the printing process:

- Images supplied in .ai or .eps formats
- High resolution image if supplied in alternative formats
- Original images are sharp and clear

Please note - when supplying us with your own imagery please ensure that you have permission to reproduce the image; some images may be subject to copyright laws.

If you are looking for a source of images, several online libraries allow you to purchase vector-based and high-resolution images suitable for reproduction, a few examples include:
